

The Superior IT Alarm System

One system that detects all important threats in the room and rack

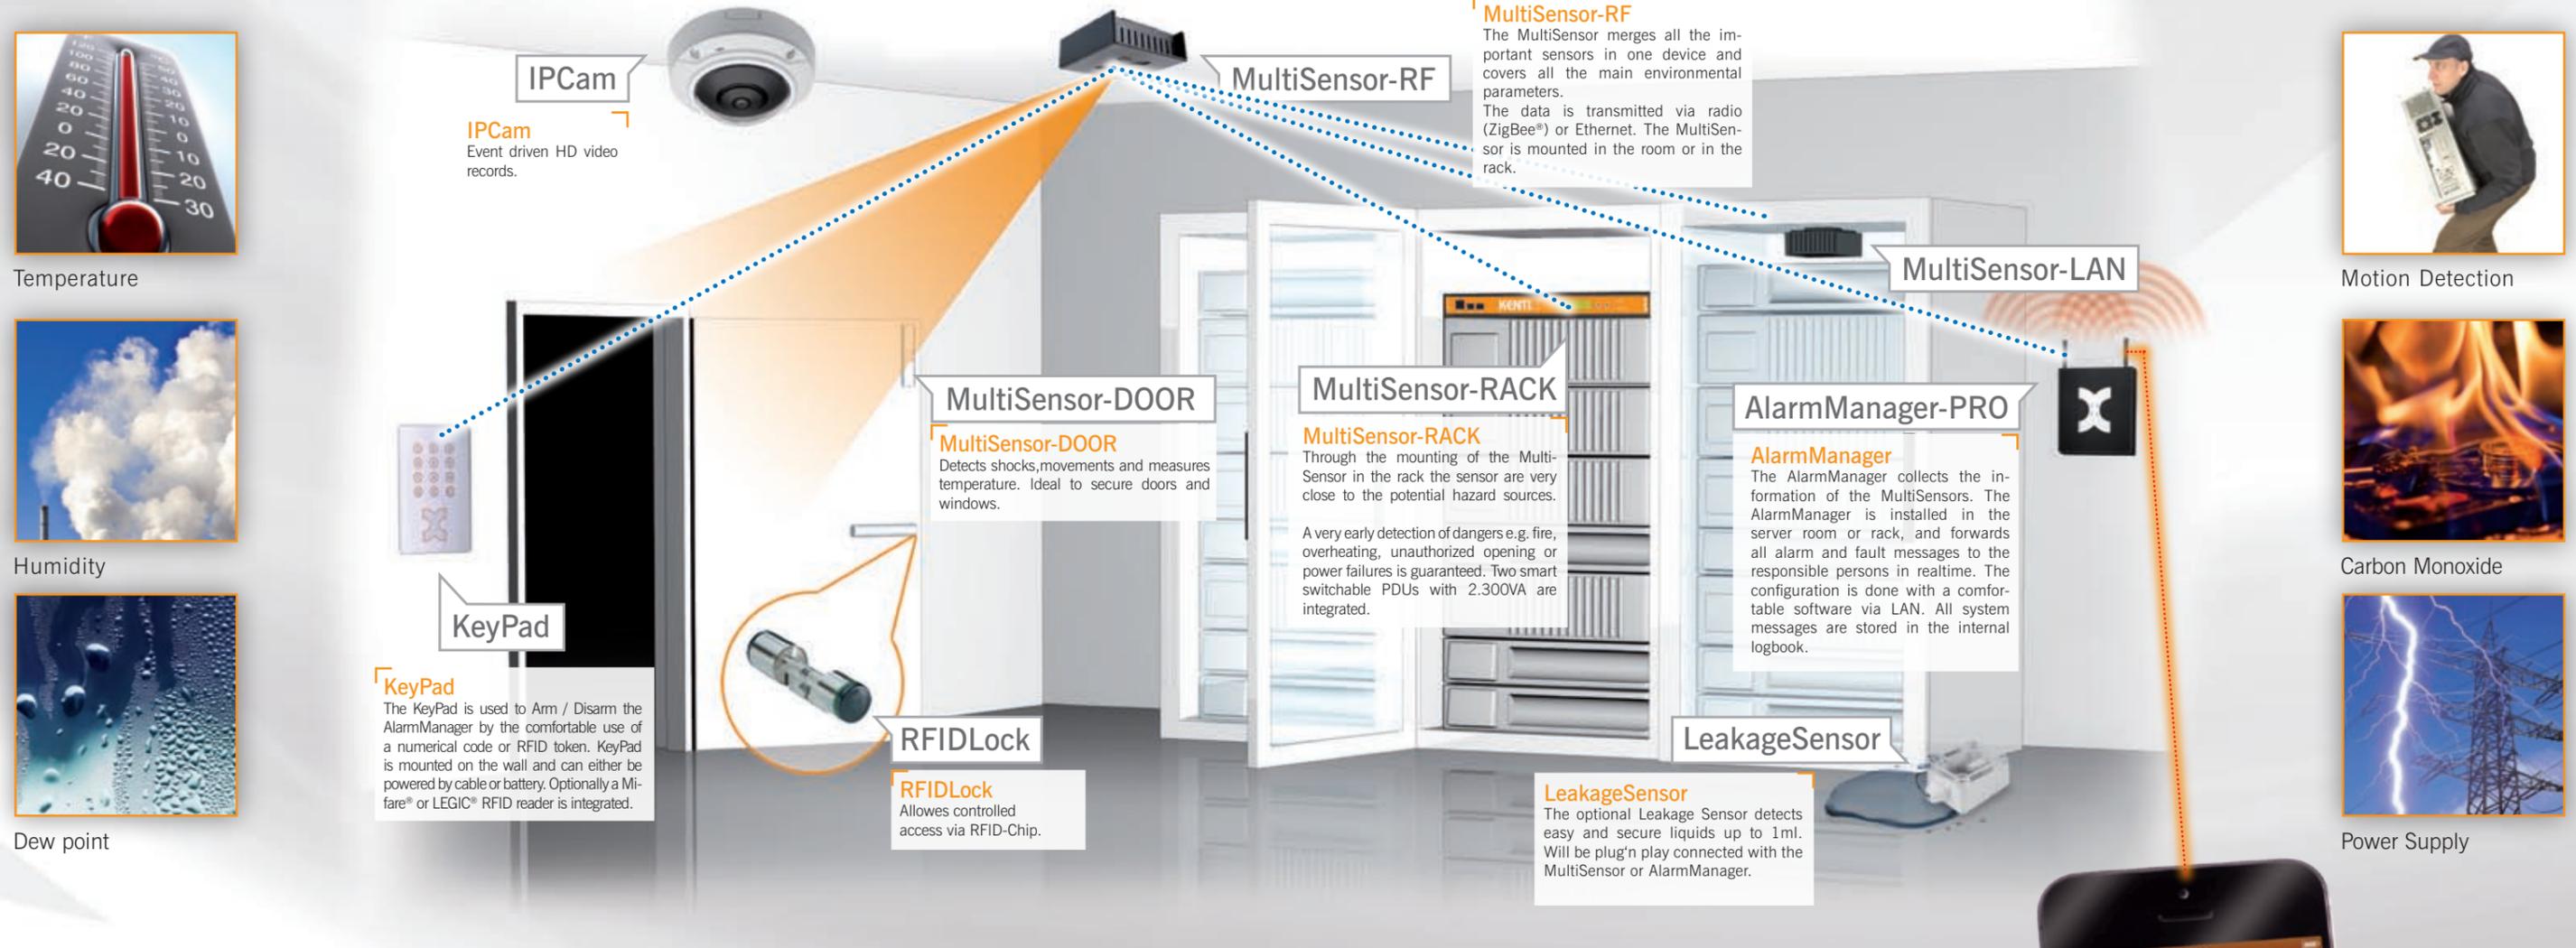

Important for each IT room!
+ Ensuring IT availability - risk protection
+ World wide information by GSM
+ Easy to install (wireless communication)

Monitoring of all risk areas in IT- and server-rooms with the innovative Kentix MultiSensor system.

- Brilliantly simple and secure with the MultiSensor technology
- Early detection of important threats
- Fast installation – easy setup
- Meets the requirements for IT baseline protection and ISO2700x
- Integration into existing monitoring solutions

One device that detects all threats in the server-room and rack – The Kentix MultiSensor

Temperature

Humidity

Dew point

Motion Detection

Carbon Monoxide

Power Supply

Effective protection of the physical risks in IT- and server-rooms.

The Kentix MultiSensor merges all the important basic physical sensors in one unit. In combination with the wireless technology (ZigBee®) it results in one of the most effective systems for IT monitoring. The MultiSensor (KMS) is also available with an direct LAN connection as an alternative to the wireless solution and can be directly connected to a network with the Kentix AlarmManager (KAM).

The installation and operation is quite easy and can be made with conventional patch cables without clamping.

Protecting your IT against the most common risks:

- Environmental disruption
- Human errors
- Physical theft
- Sabotage

Benefits:

- Threat detection - rapid response times, low costs
- Lower staff costs due to automatic monitoring
- Reduce staffing requirements - reduced liability risk
- Lower operating costs through remote monitoring
- Low investment costs - easy and hassle free installation
- ROI within 1 year - once in prevention only one failure

Easy installation and low system cost with an innovative „All In One“ solution.

All data of the MultiSensors are collected and evaluated in the AlarmManager. The AlarmManager also has the task to monitor the sensor network cyclically and message error conditions.

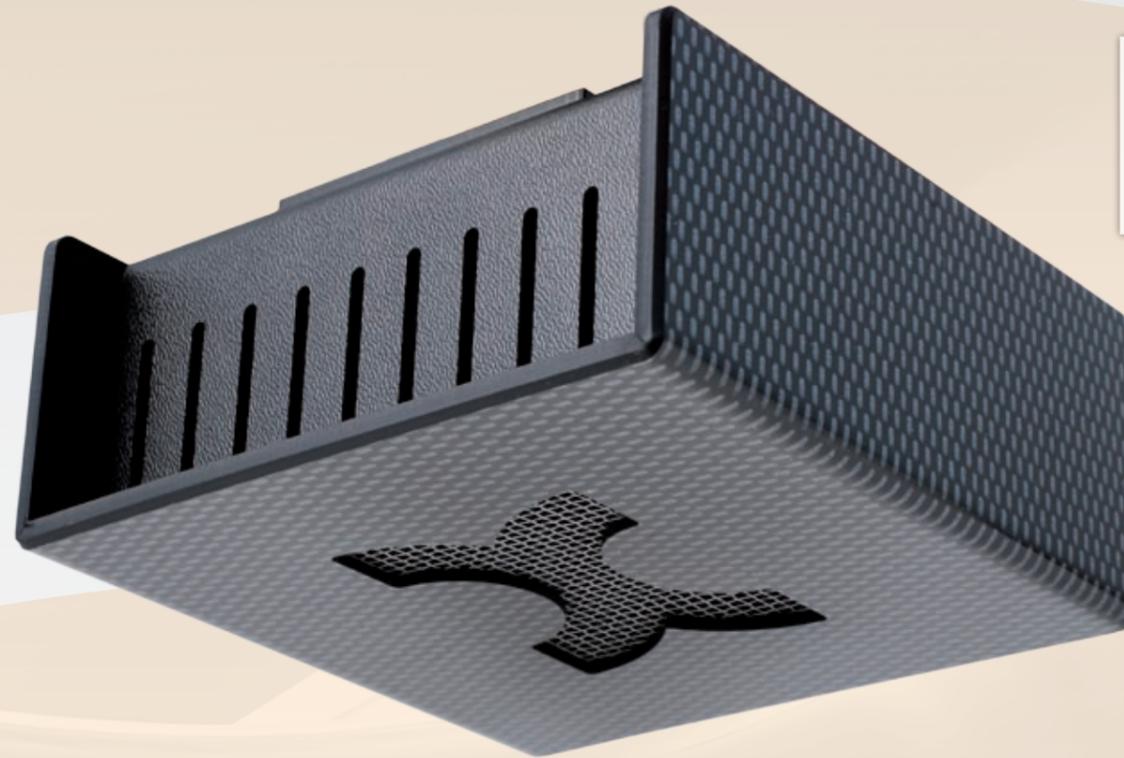

A GSM modem for independent transmission of alarm messages is integrated. The responsible staff and persons will be informed in real time on any error conditions. Messages will be send as SMS, E-Mail or SNMP traps. The AlarmManager can be controlled remotely by any mobile phone with simple SMS commands to get state informations or set the system to armed or disarmed state. The commands are protected by password and phone number.

Available on the App Store

Remote control via SMS

One device that detects all threats in the server-room and rack – The Kentix MultiSensor

Temperature

- Monitoring the temperature
- Control of cooling or heating

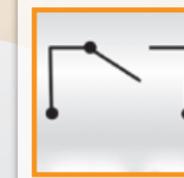

External signal inputs

- Allows connection of external dry contacts
- Door contacts, alarm messages from external systems

Humidity

- Monitoring the humidity
- Monitoring air conditioning

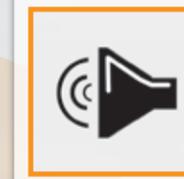

External Alarm I/O outputs

- Control of external devices such as alarm sirens, flashing lights
- Remote control of external devices

Dew Point

- Monitoring the dew point
- Avoid condensation

Acoustic signalization

- Integrated Buzzer for acoustic alarm

Power Supply

- Monitoring the external power supply
- Bridging and reporting of power failure

Infrared motion detector

- Fast motion detection
- Reliable detection of unauthorized people

ZigBee® wireless transmission

- Encrypt transmission of sensor data to the AlarmManager
- Long range and security through mesh networking

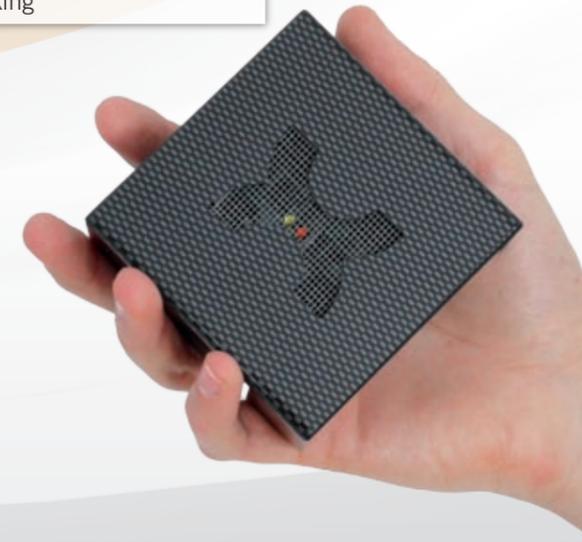

Carbon Monoxide (CO)

- Fire detection via high-sensitivity CO sensor
- Early detection of fires

Sabotage monitoring

- Continuous monitoring for tampering and sabotage of MultiSensor and AlarmManager

About Kentix

Kentix based in Idar-Oberstein, manufacturer of professional security solutions for the monitoring of servers, technical equipment rooms as well as the infrastructure and office space.

Kentix develops and manufactures its products exclusively in Germany with the highest quality standards. Authorities and enterprises from all sectors of the economy secure their IT systems against physical threats. The merger of many

different sensors in one functional unit monitoring systems are very efficient compared to the market. The use of wireless radio systems and modern web technology enables low-cost integration of systems. Kentix products avoid disruptions in the operating environment, secure systems against theft and sabotage, and report the impact of human error – and thus ensure optimal IT availability. Kentix increases IT availability significantly and is amortised within a short period of time.
