
VDG Sense Failover license

SP-FAILO

Product Description

System failure is not an option when your safety depends on it. With our failover add-on, we make sure that redundancy is guaranteed if a server failure is detected. With this add-on, VDG Sense monitors more than 100 different points, including network connectivity and hardware related functions. In any failover situation, clients will show "Server Connection Lost" in video panels until the failover server has taken over the tasks of the original server. This usually takes less than 30 seconds.
